

# Adjustable Pedestal

## DESCRIPTION

All adjustable bases consist of a series of threaded base and upper units of high density polypropylene. They can be combined with a threaded coupler . Upper units have integral 1/8 in. spacing tabs.

## BASIC USE

All adjustable pedestals are designed to be used to provide the installation of architectural pavers with open joints. The combination of adjustable pedestals and couplers can provide a rise of 2 to 16 in. to compensate for differences in height between the structural slab and the finished elevation.
